SEED ROUND · SEPTEMBER 2026

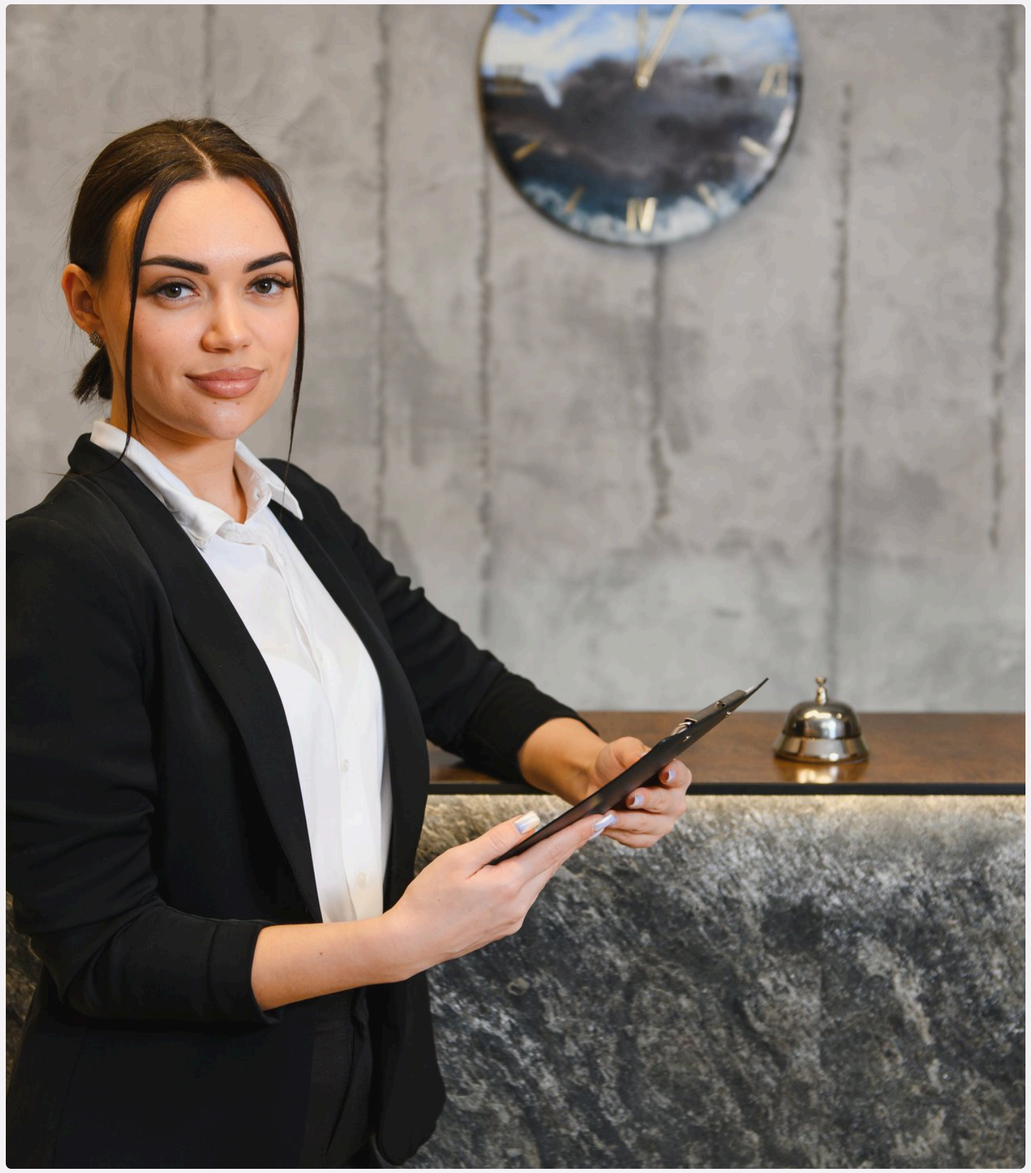

Stillroom

The quiet operating layer for hotels. Guest requests become finished tasks, drafted by AI and approved by people.

RAISING	MARKET	PRICING
$2.5M	5.79M rooms	Per room

- Portfolio Concept by Archer Design. Fictional company; not an offering.

THE PROBLEM

Hotels are asked to answer every guest, faster, with fewer people.

65%

of U.S. hotels report staffing shortages

71%

have openings they cannot fill

38%

of shortages are in housekeeping, the largest share

33.5%

of revenue goes to labor at non-union hotels

Guest requests still move by phone, radio and handwritten notes. Nobody owns the request from first message to finished work.

ONE REQUEST, TWO WAYS

The same AC complaint, handled today and with Stillroom.

TODAY

9:38
Guest texts
A message lands in a shared inbox or a desk phone.

9:52
Desk notices
Front desk reads it between check-ins.

9:55
Radio call
Engineering is radioed. No note, no room history.

10:20
Guest follows up
No update, so the guest calls again.

Next day
Review
“Took forever to fix the AC.”

WITH STILLROOM

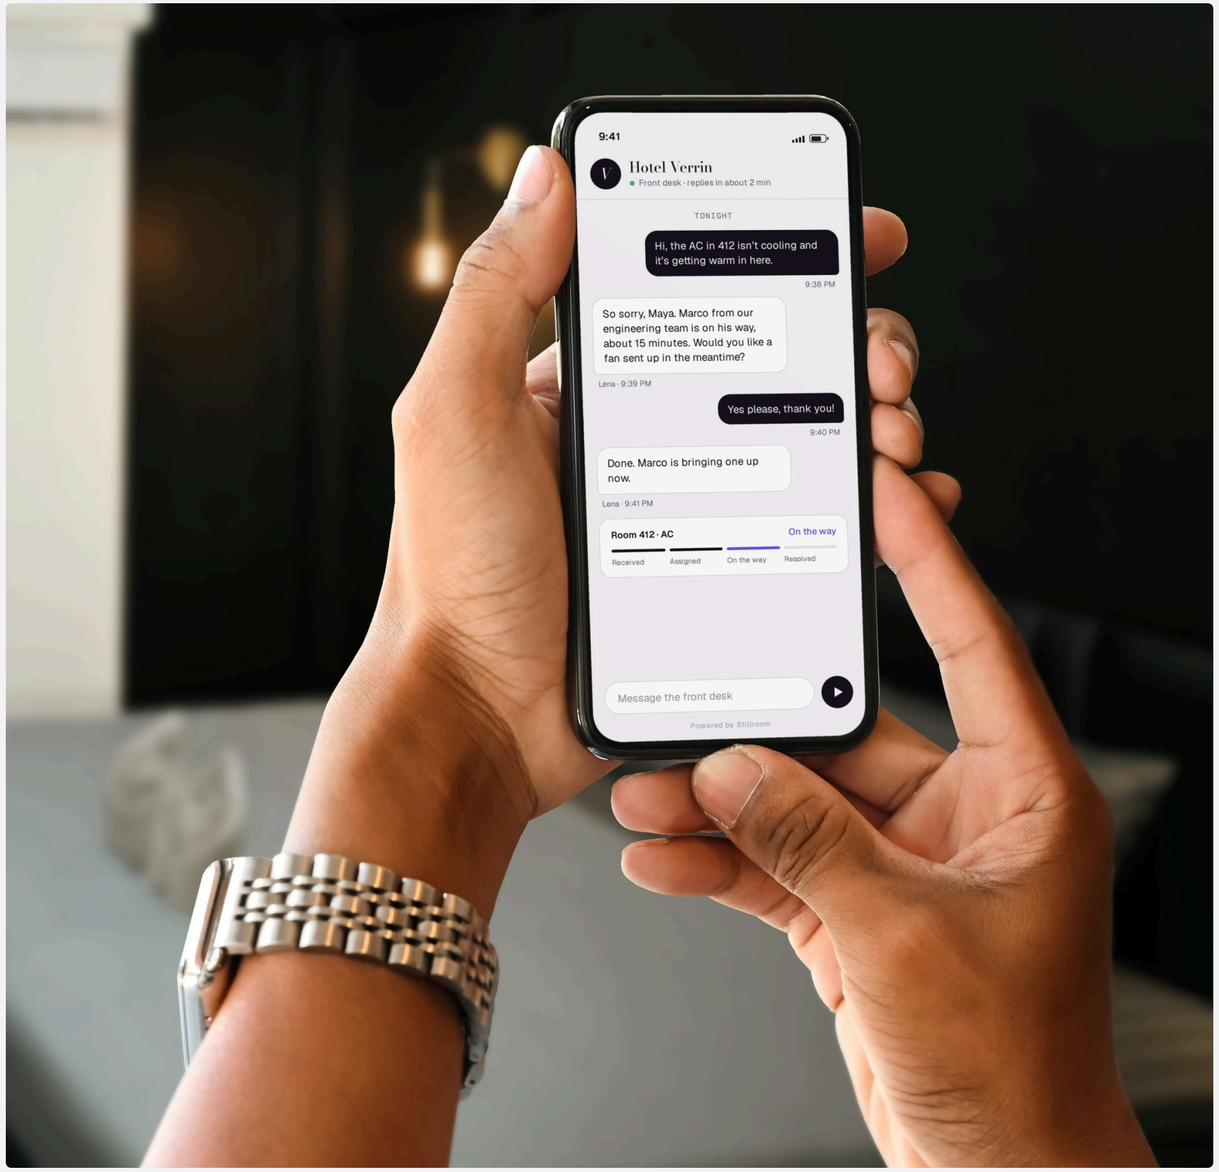

9:38
Guest texts
Stillroom reads it and opens a task for room 412.

9:38
Priority, with reasons
High: guest in room, comfort issue, second report.

9:39
Reply approved
Lena approves a drafted reply in one tap.

9:39
Routed with context
Marco gets the task, room history and checklist.

9:41
Guest kept informed
Status updates reach the guest until it’s resolved.

FOR GUESTS

Guests text the hotel like they would a friend.

No app to download. A guest texts the hotel's number and gets a reply in the hotel's voice, then live status until the job is done.

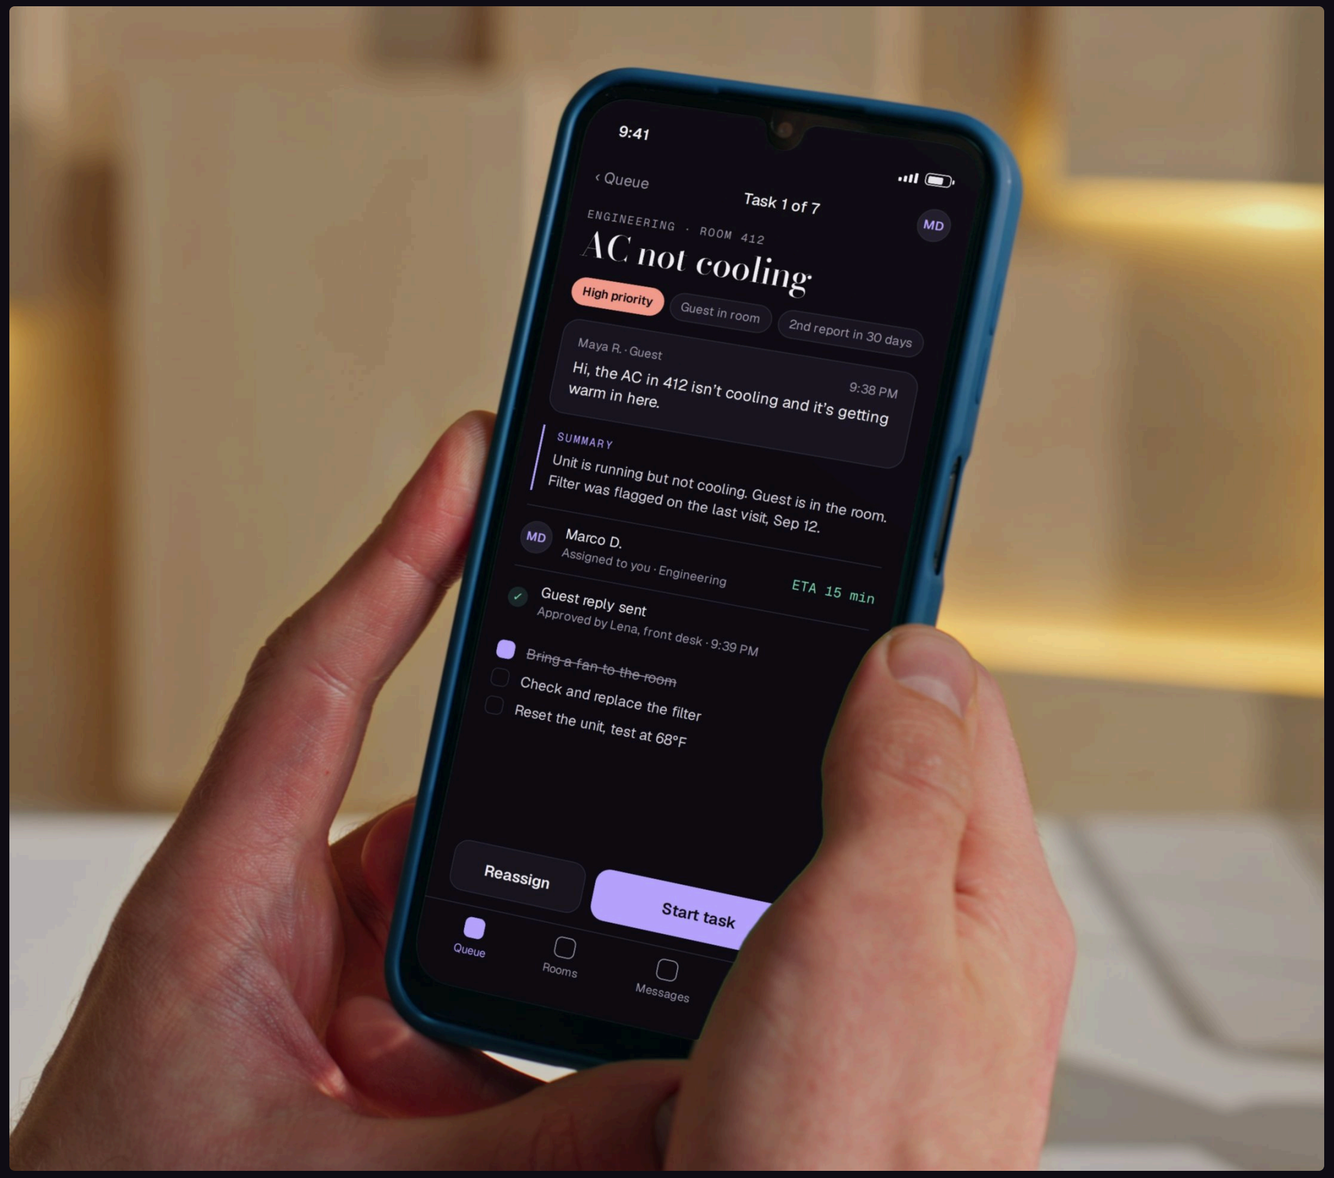

Hotel-branded	Name, monogram and tone belong to the property. Stillroom stays in the background.
Named staff	Every reply is signed by the person who approved it.
Live status	Received, assigned, on the way, resolved. The guest never has to ask twice.

FOR STAFF

Every task arrives with what it takes to finish it.

Engineers and housekeepers see the guest's words, a plain summary, room history and a short checklist. One tap starts the task and updates the guest.

Priority you can read	Each priority lists its reasons: guest in room, comfort issue, repeat report.
Room memory	"Filter flagged Sep 12." Past visits follow the room, not the person.
Built for gloves and hallways	Large targets, short text, one primary action per screen.

FOR THE GENERAL MANAGER

The whole night, on one screen.

Open requests, response times and who is on what. Anything waiting too long rises to the top.

On shift

LS	Lena S. Front desk	3 open
MD	Marco D. Engineering	1 open
AP	Ana P. Housekeeping	2 open

HOW THE AI WORKS

AI drafts. People decide.

Use AI for ambiguity. Use deterministic systems for guarantees. Keep a human where brand judgment matters.

AI

Read

Message, room and stay details are pulled together.

AI

Classify

Department, urgency and room. Unclear requests go to a person.

RULES

Prioritize

Rule-based priority with visible reasons. No hidden score.

AI

Draft

A reply in the hotel's voice and a task with a checklist.

PERSON

Approve

Staff approve, edit or reject. Nothing reaches a guest unapproved.

RULES

Route and close

Assigned to the right person; the guest sees each status change.

Never offers money

Refunds, credits and comps always need a manager.

Never invents policy

Answers come only from the hotel's own approved facts.

Always shows its reasons

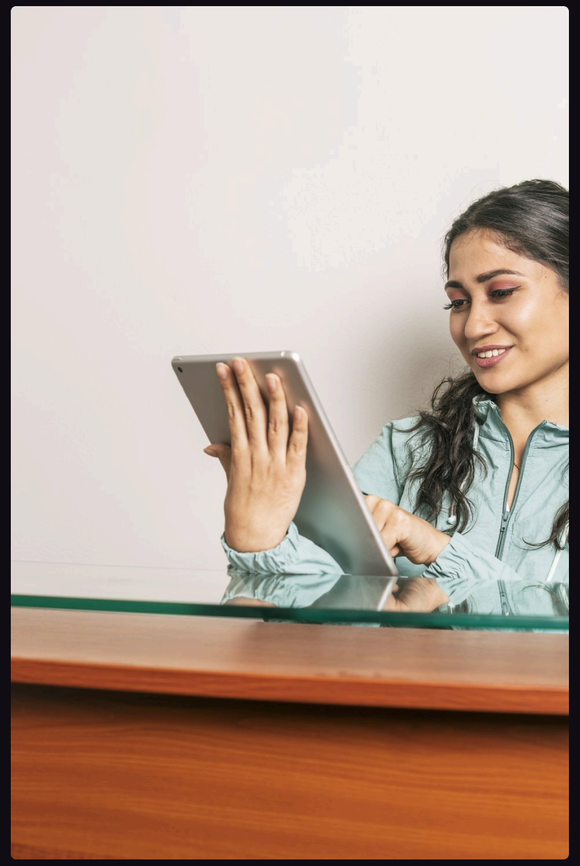

Every priority and summary can be traced to the message and room record.

Always leaves a record

Who approved what, and when, is kept for every request.

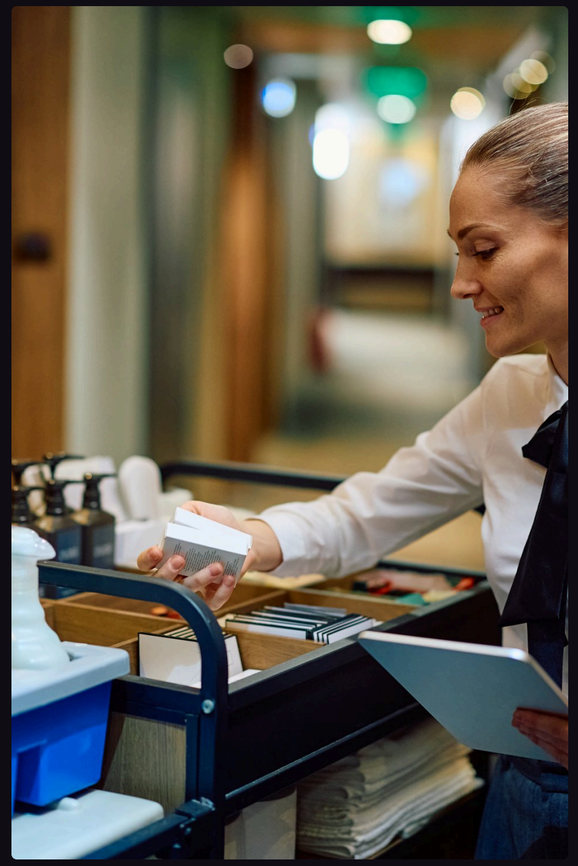

EVERY ROLE

One system across the property.

Front desk

Approves drafted replies and sees every open request in one queue.

Housekeeping

Gets stay-over requests and supply notes by room, in walking order.

Engineering

Receives repairs with the guest's words, room history and a checklist.

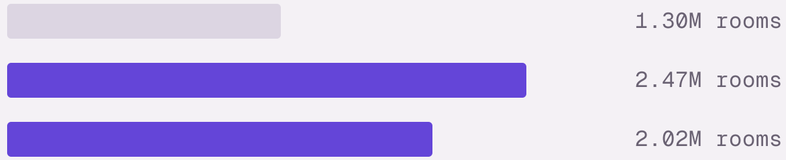

General manager

Watches response times and steps in when anything waits too long.

MARKET

5.79 million U.S. hotel rooms across 65,400 properties.

Stillroom starts below the luxury tier, where hotels run the leanest teams and have the least operations software.

Highlighted segments are Stillroom’s addressable market.

ALL U.S. ROOMS

$695M

a year at $10 per room per month

UPSCALE AND BELOW

$538M

4.49M rooms

FIRST FOCUS: UPSCALE AND UPPER MIDSCALE

$296M

2.47M rooms

BUSINESS MODEL

Priced per room, so it scales with the property.

CORE

$6

per room / month

Guest texting, task routing, staff app, live status.

PRO

$10

per room / month

Everything in Core, plus AI drafting with approval, room memory and the GM dashboard.

PORTFOLIO

Custom

management companies

Cross-property reporting, shared templates, single sign-on and volume pricing.

120-ROOM HOTEL ON PRO

$1,200

per month · $14,400 a year

÷ AVERAGE U.S. HOTEL WAGE

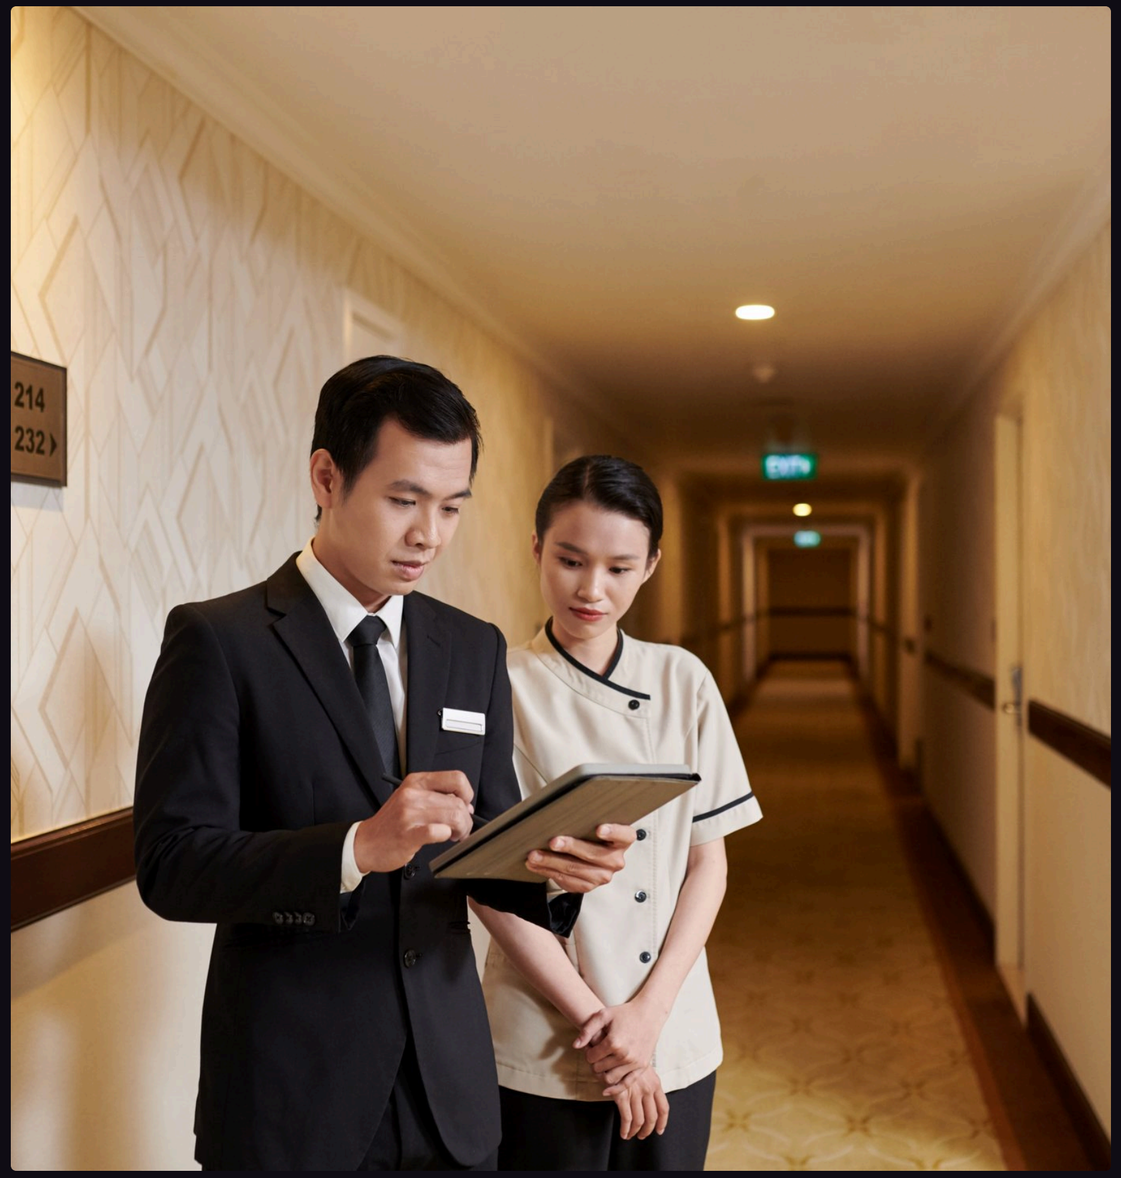

$23.91

per hour

= BREAKS EVEN AT

1.7 hours

of staff time saved per day (50 a month)

GO-TO-MARKET

Win the property, then the portfolio.

Months 0–6

Independent hotels in three metros

Founder-led sales to general managers. Self-serve setup in under a day: number, rooms, staff.

Months 6–18

Third-party management companies

One agreement reaches every property they run. Portfolio reporting is the reason to switch.

Month 18+

Property-system partners

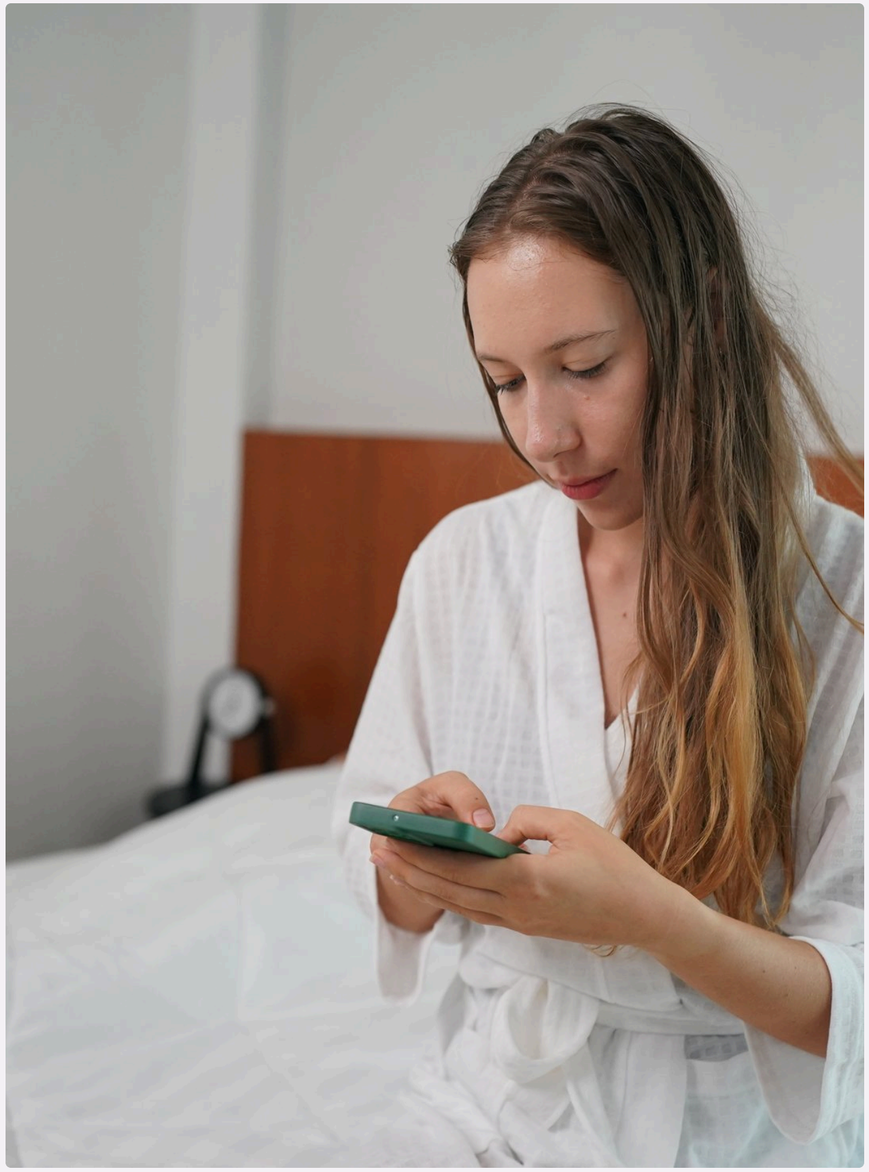

Listing in hotel software marketplaces, with two-way room status sync.

PROOF BEFORE SCALE

A 90-day pilot at three hotels, measured in public.

No traction numbers are claimed here. The pilot defines what we will measure, and every result gets published, including the misses.

MEASURE	HOW	GOAL
Median first reply	Message timestamps	Under 3 minutes
Request to close	Task open to resolved	Down 30% from baseline
Repeat requests	Same room, same issue, 72 hours	Down 25%
Drafts approved as written	Approve vs edit vs reject	Above 85%
Review mentions	“Slow”, “no response”, “fixed fast”	Tracked, reported

ROADMAP

From one room’s request to the whole building’s pattern.

NOW

Requests to tasks

- Guest texting and live status
- Staff app and routing
- Priority with reasons

NEXT · 6 MONTHS

AI with approval

- Drafted replies and tasks
- Room memory
- GM dashboard

LATER · 12–24 MONTHS

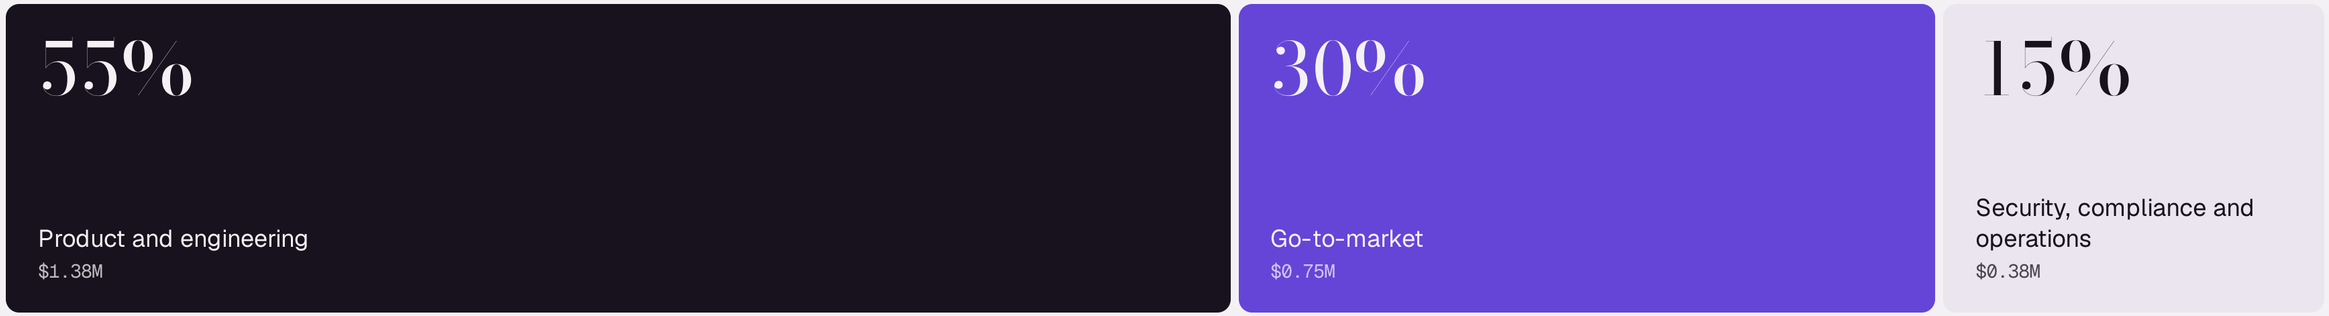

Patterns and portfolios

- Repeat-issue alerts per room and unit
- Preventive maintenance lists
- Cross-property benchmarks

THE RAISE

$2.5M seed for 18 months.

Enough to prove the pilot, reach management companies and build the approval layer to a standard enterprise buyers accept.

MONTH 3

3 hotels

Pilot live, baseline measured

MONTH 9

15 hotels

First management-company contract

MONTH 18

40 hotels

4,800 rooms · $0.58M ARR on Pro

Stillroom

A Portfolio Concept by Archer Design, made to show product, AI and investor storytelling in one piece. Stillroom and Hotel Verrin are fictional. Market data comes from the sources listed. Pricing, pilot goals, the raise and milestones are illustrative, not results. App screens were designed for this deck and placed into licensed stock photography.
